Bytes from the Editor

When conversations and laughter blended into the learning atmosphere!

Voices of Vidya Students

In the third edition we hear from

Amritesh

Kashish

Nikesh

Bytes from the Editor

By Taarini Singh

Dear Readers,

After three sessions, we had learned all about space's interesting phenomena and explored astrology's complex relationship with astronomy. During these discussions, our conversations became more free flowing and laughter erupted in the class frequently, especially when Neelam told us how she had earlier thought that Mars was red in colour because it had been sprinkled with chilli powder.

In this issue, you can read and explore the voices of the Vidya school students as they uncover their beliefs about space and the world beyond our own.

All about aliens

By Kashish

Earth after 100 years

By Amritesh

When I returned back to the earth after 100 years, I saw that many changes had taken place- robots were serving meals in restaurants and people were using the Hyperloop concept to travel short distances in reduced time. Also, all the travel medium was run using electricity so the earth's climate was very good as compared to hundred years ago. Since there were drastic changes that had taken place, I was facing many problems and needed time to adapt to the situation.

Am I a true gemini?

By Amritesh

My zodiac sign is Gemini. The personality traits that I identify with are adaptable, intelligent, outgoing and self confident. However, the personality traits I don't identify with are nosy, unreliable, indecisive and impulsive.

Future Earth

By Nikesh

Gemini Baby!

By Kashish

My zodiac sign is Gemini. I think I am adaptable but not very outgoing. I don't know whether I am intelligent because one should never praise oneself. I am quite indecisive but I am not nosy, impulsive or unreliable.

What lies ahead?

By Kashish

I saw Earth last in 2021 and now its 3050.

When I reached Earth after so many years, my country's government welcomed me. I told them everything about my journey and exposed the hidden secrets of our universe.

I noticed that the environment, transportation, education and people's lifestyle had changed to a next level.

There was greenery everywhere because there was less pollution due to the electric vehicles and machinery.

There were flying cars and transport without wheels. There was no traffic on the roads but I could see traffic in the sky. I had only ever seen something like this in 2019 in the Doreamon cartoons. Seeing this in real life, I couldn't understand how they would manage the traffic in the sky because in the past they couldn't even manage it on the roads.

I also saw that there was no school in the towns. After some research, I found that nobody had to go to school now because everybody could learn everything at home with robot teachers. I felt bad for this generation's children because they would not enjoy their school life.

Everything was done by robots so there was a lot of unemployment among the people. But luckily our world found a solution to this.
